

## Benefits

- **Appropriate security across core building blocks**
- **Access unique practice-proven expert knowledge**
- **Operationalise your Microsoft investment**

Microsoft 365 and Azure are the backbone of most modern organizations. Securing your Microsoft 365 and Azure environment is critical to protecting your business, as it is a heavily used interface for user interaction and contains much of your data. The service checks your environment to give you confidence in that your business is adequately protected and offers you effective levers for improvement.

## Approach

Systematically improve the security and robustness of your Microsoft Cloud setup. *Microsoft Cloud Security Hygiene* gives you visibility across exposure domains and verifies the most important security settings.

Based on identified gaps, selected topics are further analysed and improved in tailored projects.

## Deliverables

### *Microsoft Cloud Security Hygiene*

- Privileged Identity Management, break glass
- Endpoint Security baseline, ASR baseline
- Vulnerability and exposure status
- Sharing policy key office apps
- Out of band backup status and policy
- License check, unused packages
- Response processes & responsibilities, KPIs

### *Project Examples Identity & Entra*

- Identity hardening, segmentation
- Advanced identity governance, authentication
- Specialized entry configuration

### *Project Examples Infrastructure & Azure*

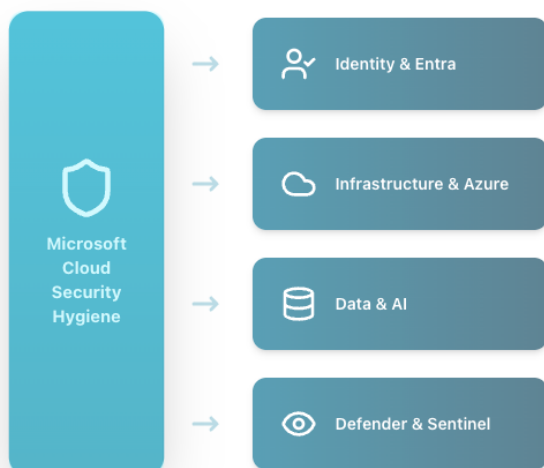

- Endpoint & server hardening
- Vuln & exposure management, workload protection
- Zero trust architecture and implementation

### *Project Data & AI*

- Purview and AI Foundry verification
- effective concept development, architecture design
- business alignment, rapid rollout, operations.

### *Project Examples Defender & Sentinel*

- Detection coverage strategy, implementation
- Automation response, SIEM, SOAR improvement
- SecOps process and metrics

**Make your business Cyber Risk resilient**
